

HMIS 033b:

HEALTH UNIT WEEKLY EPIDEMIOLOGICAL SURVEILLANCE REPORT

DESCRIPTION AND INSTRUCTIONS

- Objective:** To report cases of notifiable diseases, other diseases of public health importance, OPD attendances, eMTCT appointments, Malaria tested and treated, TB tested and treated and stock balances of select tracer items.
- Frequency:** Every Monday of the Week in a calendar year
- Copies:** **Three Copies (Triplicate).** Triplicate stays at the health unit, duplicate is sent to the Health-Sub-District Headquarters, the Original copy is sent to the District health office.
- Responsibility:** Health Unit In-charge

PROCEDURE:

1. All health units must report this information (Government, Private Health Providers and PNFP) to the HSD and DHO. In addition, the health facility should report any other priority disease and/or events as required by the District Health Officer.
2. The report should be clearly labeled to show the period covered i.e. date for the first (Monday) and last day (Sunday) of the week for which the report is being made.
3. For each disease category indicate the number of new cases during the week (cases this week), the number of deaths that occurred during the week (deaths this week) and those tested (tested cases), tested positive (Pos(+ve) cases)
4. For Maternal deaths, Perinatal deaths, OPD and eMTCT summary, summary of malaria cases tested and treated, summary of tuberculosis cases tested and treated during the week, tracer medicines - stock balance, HIV testing kits, TB, & eMTCT drugs - stock balance, summary of Genexpert report and summary of IPT initiation, refer to the SOPs for the case definitions and how to extract the data.
5. For Other conditions (EPC.), refer to the given table below of other priority diseases/conditions for the codes when reporting using mTrac.
6. Refer to the SOPs for the case definitions and how to extract the data.
7. The health unit continues to report every week throughout the year whether there are cases or not and this should take care of "zero" report.
8. Transcribe the data every week into HMIS form 033c (Health Unit Weekly Epidemiological Surveillance Summary for the year) for the respective weeks. For example 10 cases with 2 deaths are recorded as 10 (2).

HMIS 033b:

HEALTH UNIT WEEKLY EPIDEMIOLOGICAL SURVEILLANCE REPORT

Health Facility Name.....Week..... Month Calendar Year:

SELECTED OTHER PRIORITY DISEASES UNDER IDSR (INTEGRATED DISEASE SURVEILLANCE AND RESPONSES)

Epidemic Prone Diseases/ Conditions	Code	Diseases/conditions targeted for elimina- tion or eradication	Code	Disease of public health importance	Code
Chikungunya	CG.	Dracunculiasis	DC.	Diarrhoea with dehydration <5	DD.
Dengue	DG.	Onchocerciasis	OC.	Severe pneumonia <5	PN.
Influenza-like illness	IL.	Buruli ulcer	BU.	Human African Trypanosomiasis	TX.
Acute viral hepatitis	HP.	Lymphatic Filariasis	LF.	Trachoma	TR.
		Noma	NO.	Schistosomiasis	SC.
		Human influenza due to a new subtype	HN.	Diphtheria	DP.
		Severe Acute Respiratory Syndrome (SARS)	SS.	Pertussis (Whooping cough)	WC.
		Smallpox	SP.	Brucellosis	BC.
				Kala azar	KA.
				Nodding Syndrome	NS.
				Adverse Drug Reactions (ADR)	AR.

Note: 1. The health unit continues to report every week throughout the year whether there are cases or not and this should take care of “**zero report**”.

2. For standard case definition of all priority IDSR diseases and conditions refer to the **standard case operating procedures**.
